- Deposit R7 000
- Instalment (over 10 months) ~~R3 650~~ R2 382
- Reassessment fee R450

PURPOSE OF THE QUALIFICATION

A business analyst works as a liaison amongst stakeholders in order to elicit, analyse, communicate and validate requirements for changes to business processes, policies and information systems. The business analyst understands business problems and opportunities in the context of the requirements and recommends solutions that enable the organisation to achieve its goals. Traditionally business analysts were drawn from senior information technology (IT) and business people, whereas this qualification provides lower level access for the development of such competencies. It has also been developed to enable learners to access higher education and provide flexible access to life-long learning.

This qualification provides opportunities for people to engage in further learning towards a specialisation in business analysis or achieve competencies that are portable to other specialisations such as systems development or systems support.

This will therefore enable business analysis competencies to be strengthened, and enable individuals who are currently working in a business systems environment, to better contribute to the implementation of solutions that support the business requirements.

The competencies of business analysis have been identified as a target development area for the ICT sector and the South African government. The demand for this qualification is evidenced by these National initiatives as well as international demands and trends. It is intended to empower learners to acquire knowledge, skills, attitudes and values required to operate confidently as individuals in the South African community and to respond to the challenges of the economic environment and changing world of work.

Ultimately, this qualification is aimed at improving the productivity and efficiency of business analysts within all sectors in South Africa.

EXIT LEVEL OUTCOMES

On completion of the is qualification learners are able to:

- Analysis a business scenario.
- Develop a business case.
- Compile user requirement specifications.
- Develop functional specifications.
- Monitor quality assurance activities throughout the life cycle of the project

QUALIFICATION OVERVIEW

Modules	US ID	US Title	NQF Level	Credits
Core	259297	Conduct solution assessment and validation	Level 6	15
Core	259278	Manage and communicate requirements	Level 6	5
